

ENVIRONMENTAL MANAGEMENT POLICY

To be an "environmentally friendly enterprise" that complies with national and international environmental laws and regulations, establishes, implements and continuously develops an environmental management system that it will continuously apply in all its activities in the areas where it produces products and services in order to protect the ecosystem by preventing unnecessary use and pollution of resources globally.

To this end;

Protecting natural resources: Using technologies that use natural resources efficiently and generate little or no waste as much as our financial resources allow,

Reducing waste: Reducing waste at its source, recycling, ensuring that it is disposed of by expert organizations with appropriate methods without adversely affecting the environment,

Staying up-to-date: To work in accordance with current regulations as much as our sectoral requirements allow, by following the changes in environmental laws and regulations covering our field of activity,

Continuously improving the system: Working to achieve our periodic targets by constantly reviewing and improving our environmental management system within the framework of our technological and financial possibilities, not limited to laws and regulations,

Trying to increase environmental awareness: Being in constant communication with our suppliers, subcontractors and customers, encouraging them to be environmentally sensitive and sharing the information we have, making the environmental sensitivity of the people and organizations we do business with as the criteria for our work with them, contributing to the development of our employees' environmental awareness with trainings and exemplary studies,

Being open: It is Kale Care Chemicals' responsibility to keep all the work we do on the environment accessible, to announce the results we have achieved and our new goals.
